

# Audit Checklist

Rust – Version 1.0

## Send us the scope for the audit:

- ☐ Send us relevant documentation such as whitepapers, websites, or online documentation
- ☐ Send us the repositories and commit hash that should be used for the quote
- ☐ Specify the relevant directories/files in the repositories for the audit
- ☐ Send us an outline of how the scope/code will change before the audit begins, including a detailed description of any still unimplemented parts

## In addition, before the audit starts:

- ☐ Resolve any compiler warnings returned by `cargo build`
- ☐ Apply [rustfmt](#): `cargo fmt`
- ☐ Resolve any issues returned by [clippy](#) by running `cargo clippy`
- ☐ Ensure all tests of your projects pass: `cargo test`
- ☐ Ensure you have sufficient test coverage, e. g. through [tapalutin](#):  
`cargo tapalutin -v`
- ☐ Remove any files that are not specific to your project, e. g. Markdown files from a template you used
- ☐ Remove any commented/unused code
- ☐ Resolve any pending TODOs
- ☐ Send us the repositories and commit hash that should be used for the audit (code freeze)
- ☐ Specify the relevant directories/files in the repositories for the audit
