

# Audit Checklist

Go – Version 1

## Send us the scope for the audit:

- ☐ Send us relevant documentation such as whitepapers, websites, or online documentation
- ☐ Send us the repositories and commit hash that should be used for the quote
- ☐ Specify the relevant directories/files in the repositories for the audit
- ☐ Send us an outline of how the scope/code will change before the audit begins, including a detailed description of any still unimplemented parts

## In addition, before the audit starts:

- ☐ Resolve any compiler warnings (e.g. `make` or `go build`)
- ☐ Apply code formatting (e.g. `make format` or [Gofmt](#) `gofmt -w .`)
- ☐ Resolve any issues returned by your linter (e.g. `make lint` or [golangci-lint](#): `golangci-lint run`)
- ☐ Resolve any issues returned by Vet: `go vet`
- ☐ Ensure all tests pass (e.g. `make test` or `go test`)
- ☐ Ensure you have sufficient test coverage, e. g. through [go tool cover](#): `go test -cover`
- ☐ Remove any files that are not specific to your project, e. g. Markdown files from a template you used
- ☐ Remove any commented/unused code
- ☐ Resolve any pending TODOs
- ☐ Send us the repositories and commit hash that should be used for the audit (code freeze)
- ☐ Specify the relevant directories/files in the repositories for the audit
